

AVX, processortyp

Om någonting klagar på att en VM inte har "AVX" , ex:

```
mongodb-1 |  
mongodb-1 | WARNING: MongoDB 5.0+ requires a CPU with AVX support, and your current system does not  
appear to have that!  
mongodb-1 | see https://jira.mongodb.org/browse/SERVER-54407  
mongodb-1 | see also https://www.mongodb.com/community/forums/t/mongodb-5-0-cpu-intel-g4650-  
compatibility/116610/2  
mongodb-1 | see also https://github.com/docker-library/mongo/issues/485#issuecomment-891991814  
mongodb-1 |  
mongodb-1 exited with code 132
```

Så får man byta processortyp till VMn i Proxmox. VM -> Hardware -> Processors -> Edit -> Byt typ till "host"

Standard är x86-64-v2-AES.
